

## **SRRTTF Technical Track Work Group Discussion Item**

### **Interest in a 2013 PCB Workshop**

Is there interest in sponsoring a 2013 PCB Workshop?

Possible topics include:

- Data uncertainty analysis: data quality, how levels of uncertainty are assessed, impacts on decision making
- Congener pattern analysis: how it is used, what the methods are, limitations of methods, uncertainty analysis
- State of River: results of recent sampling analyses, evaluation of sampling methods
- Chemical Action Plan for PCB
- Atmospheric deposition: source (global, regional, local); type (gas, particulate, PM10, PM2.5, water, snow); data gaps; sampling methods (passive, filter (HiVol, membrane), Draeger tube, other); sampling infrastructure in Spokane (Ecology, SCRAA)
- Source Reduction Techniques: Best Management Practices that work!
- Data gaps in the Spokane River Watershed
- Other ideas based on review of last year's Workshop
