

Purpose Statement

Workshop

To: Provide a forum for the open exchange of information on the goals for and the design of a monitoring plan for establishing the current state of PCB in the Spokane River as well as source identification related activities

In a way that: Allows those involved (regulators, academia, and consultants) in PCB water quality in other geographic areas to discuss their activities and provide insights into what they have learned from their efforts in areas applicable to Spokane River issues.

Provides input on approaches for the design of a river monitoring plan that identifies sampling locations, sample collection methods, frequency of sampling and other related data collection related actions.

Provides input on approaches for gathering potential “true” source identification and location information in support of the river monitoring plan.

Provides the opportunity for SRRTTF members to have discussions with presenters and among themselves.

Provides the opportunity for SRRTTF members to “brainstorm” how learnings can best be used to identify potential future actions.

So that: All SRRTTF members have the opportunity to provide input and direction to LimnoTech for the development of the Task Force’s overall monitoring plan.
