**Work Request - Reviewer's Version**

Print Version

**Work request summary****ID:** 4532**Requesting staff:** Borgias, Adriane**Requesting client:** Water Quality Program, Eastern Regional Office**Work request title:** FY 2017 Estimate of PCB loading in stormwater**For Fiscal Year** FY 17**Work request description:**

In FY 2016 EAP performed a review of stormwater data collected by the City of Spokane. The review identifies a need for stormwater basin modeling, including a water quality component and recommends ongoing sampling the top 10 or top 30 basins. This information is an essential data gap identified by the Spokane River Regional Toxics Task Force (Task Force). The project would assist the City of Spokane in collecting this data since the City's currently lacks monitoring and analytical staffing to conduct this level of analysis. The collection of this data will assist the Task Force in completing and implementing its Comprehensive Plan, a key component of the Task Force MOA.

**Work objectives:****Preferred time period or any deadlines for when the work should be conducted:**

Begin July 1, 2016 and coordinate with ongoing SRRTTF Technical Work Plan and City of Spokane activities.

**Comment:**

This project was rated as medium priority by the water quality program. EAP has provided some technical support related to this in 2015. It is not clear if this is still an unanswered question or if more work is needed to characterize PCBs in stormwater. See: <http://teams/sites/WQ/TMDLDEVAJ/projectplanning/SoireeDocuments/FY%202017%20Estimation%20of%20PCB%20loading%20in%20stormwater.docx>
