### Work request summary

ID: [4533](#)

Requesting staff: Borgias, Adriane

Requesting client: Water Quality Program, Eastern Regional Office

Work request title: FY 2017 Sediment Sampling in the Spokane River for PCB Sources

For Fiscal Year FY 17

Work request description: The Spokane River Regional Toxics Task Force (SRRTTF) is tasked with identifying sources of PCBs to the Spokane River and identifying Best Management Practices (BMPs) that reduce PCB inputs to the river. PCBs in sediment could impact the water column. Two reaches of the Spokane River have the highest levels of PCBs in fish tissue, which could indicate high concentrations of PCB in sediment. This project proposes to 1) perform literature for existing studies and data, 2) plan sampling approach, and 3) collect and analyze sediments in these reaches which would help guide future source reduction activities and BMPs.

Work objectives:

Preferred time period or any deadlines for when the work should be conducted: This project will complement the implementation of the SRRTTF Technical Work Plan, which is underway.

Comment: This project was rated as medium priority by the water quality program. See also: <http://teams/sites/WQ/TMDLDEVAJ/projectplanning/SoireeDocuments/FY%202017%20Sediment%20Sampling%20in%20Spokane%20River%20for%20PCB%20Sources.docx>
