

SRRTTF Questions on Policy 1-11

1. Can you provide an example calculation of PCBs in fish tissue? How do you perform the calculation?
2. In section 2I(1) Directly Assessing Human Health Criteria Attainment, please explain what is meant by the statement, "Attainment of the human health criteria in the water column does not necessarily signify that the harvest use is supported." Does this mean that if water column achieves the standard, but fish exceed the standard, then the water body is impaired and remains listed?
3. On page 66 under Age of fish, if the age range exceeds 10 years, are the greater-than-10-year fish data not to be used?
4. On page 66, under Trophic level, please explain this paragraph. What is "upper trophic levels of edible species" and why is this information needed to delist a waterbody?

If there is time remaining after these questions, here are a couple others:

5. What is the process for getting the SRRTTF's Comprehensive Plan evaluated as a 4B?
6. How do we get from a Class 5 to Class 1 and have a water body delisted?
